SUMMARY

Software Engineering student with full-stack experience in React, Next.js, Spring Boot, and Node.js, plus exposure to industrial protocol integration. Seeking PFE internship to apply and grow these skills in a real-world engineering environment.

EXPERIENCE

Intern June 2026 – August 2026
Elco Solutions *Tunis, Tunisia*

- Developed a diagnostic module for Modbus (TCP/RTU) and MQTT protocols, letting users test device configurations before deployment and reducing troubleshooting time on the industrial gateway.
- Built a Full Test Dashboard for one-click testing of all Modbus devices and MQTT connections with real-time feedback, isolating failures per device without blocking the rest of the run.
- Implemented error classification with user-friendly messages and actionable suggestions, translating low-level protocol errors into readable diagnostics for non-developers.

Intern February 2024 – May 2024
CNI – National Center of Informatics *Tunis, Tunisia*

- Developed an API request management platform for Tunisia's National Interoperability Project (Angular, Spring Boot, PostgreSQL), managing 100+ API service requests across multiple government entities.
- Implemented JWT authentication, role-based access control for 3+ user roles, and multi-step validation workflows, reducing manual validation time by 40%.
- Built real-time API dashboards and automated request tracking, reducing monitoring effort by 50%.

PROJECTS

AI Interview Simulator | *MongoDB, Express, React, Node.js, Vapi, Gemini API*

Built an AI-powered interview simulation platform with real-time voice interaction and configurable role, difficulty, and interviewer style.

Implemented dynamic follow-up questions based on user responses, with stored interview history and transcripts for progress tracking.

AI Learning Platform | *Next.js, MongoDB, TailwindCSS, Gemini API*

Built a full-stack learning platform with role-based access (Student, Instructor, Admin), course enrollment, and progress tracking.

Integrated an AI chatbot and AI-driven course recommendations based on user learning activity.

Healthcare Appointment System | *Symfony, MySQL*

Developed a role-based platform for Admins, Doctors, and Patients with appointment booking, availability validation, and calendar-based doctor scheduling.

Implemented prescription upload and download functionality.

SKILLS

Languages: Java, Python, JavaScript, C#
Frontend: React, Next.js, Angular, HTML, CSS, Bootstrap, TailwindCSS
Backend: Node.js, Express.js, Spring Boot, Symfony, ASP.NET
Databases: MySQL, MongoDB, PostgreSQL
Industrial Protocols: Modbus (TCP/RTU), MQTT
Tools: Git, GitHub, Postman, JWT Authentication, Render, REST APIs, VS Code

EDUCATION

Engineering Degree in Software Engineering 2025 – Present
Tekup University *Tunis, Tunisia*
Bachelor's Degree in Computer Science 2021 – 2024
Higher Institute of Computer Science and Multimedia of Gabes (ISIMG) *Gabes, Tunisia*

CERTIFICATIONS

Microsoft Azure AI Fundamentals | Microsoft Dynamics 365 Fundamentals (CRM)
